

Armada

Tomato

Description

Armada is an intraspecific hybrid tomato rootstock designed to improve fruit quality, shelf-life, and overall plant performance.

Grafting scions onto Armada rootstock significantly improves fruit firmness and reduces weight loss, respiration rates, and ethylene production, which helps extend postharvest shelf-life.

Delivers strong commercial yields, ranking high in trials for marketable fruit weight per plant.

Built with a multi-disease resistance and tolerance package well-suited for intensive production systems like high-tunnels and open-field farming.
